

- ❖ Data Analytics Internship – Final Report
- ❖ Name: Yellamla Anshu
- ❖ Organization: ApexPlanet Software Pvt. Ltd.
- ❖ Executive Summary

During this internship, I performed data cleaning, exploratory data analysis, visualization, statistical testing, customer segmentation using K-Means clustering, and predictive modeling. I used Python libraries such as Pandas, NumPy, Matplotlib, Seaborn, and Scikit-learn to analyze the dataset and generate meaningful business insights.

Top 5 Insights

- Data cleaning improved the quality of the dataset.
- Visualizations revealed important trends and patterns.
- Customer segmentation grouped similar customers effectively.
- The predictive model achieved good performance.
- Key features influencing predictions were identified.

Business Recommendations

- Focus on high-value customer segments.
- Use predictive analytics for better decision-making.
- Continuously monitor KPIs to improve business performance.

Conclusion

- This project demonstrated the complete data analytics workflow, from data preprocessing to predictive modeling, and provided valuable insights for business decision-making.
